

03 British Gas Training Centre

Spectrum Architectural were asked by Platform to implement the signing that they had designed for the British Gas Training Centre in Thatcham.

All of the implementation had to be done out of hours as the Thatcham Centre had to continue as a working training centre throughout the process. The work had to commence at very short notice. We initially painted the feature coloured walls using a team of decorators working over a weekend. Once the paint had dried, our installation teams installed ultrafine vinyl graphics onto the block work walls. This gives the visual effect of sign written graphics but crisper more consistent and at a fraction of the cost. We were able to supply the additional specialist teams necessary to complete this work to a very high standard in a very short time.

We also installed robust floor graphics which are designed to be walked-over, door signs and large 3m x 2m banner signs suspended from the ceiling.

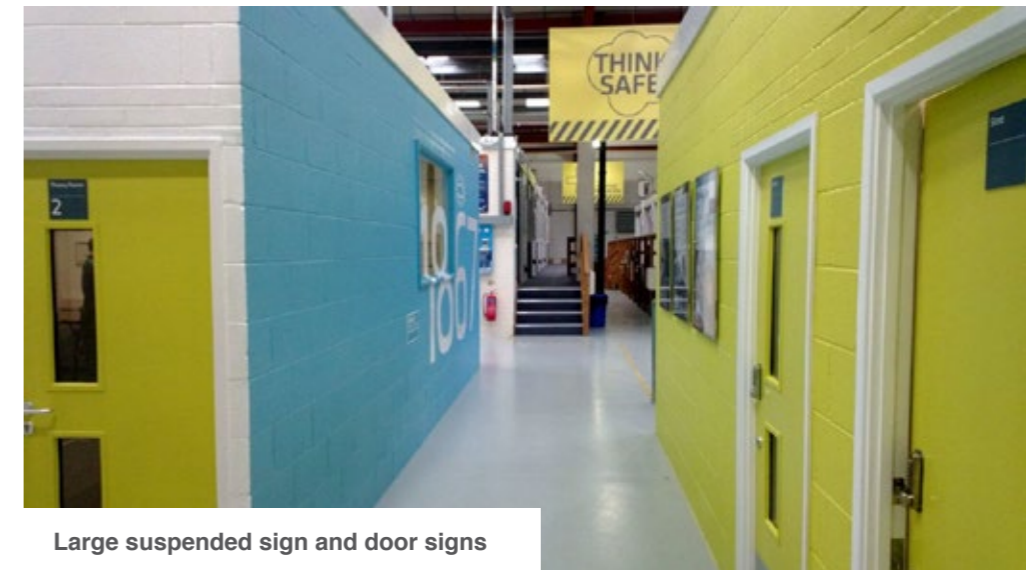

There was minimal snagging which was carried out quickly. We understand from the feedback received that the client is very happy with the finished project.

Robust floor graphics

Decorated walls and large scale vinyl graphics

Large suspended sign and door signs

Ultrathin vinyl graphics onto blockwork walls
