

I-Sign Flex

The display frame has evolved with the introduction of the sophisticated I-Sign Flex system.

Product Brochure

A sophisticated modern look

I-Sign Flex is an elegant and flexible display frame and signage system

Slim, neat and with a stylish design that features mitred corners, I-Sign Flex is constructed in silver aluminium with an anti-reflective acrylic cover. Wall mounted frames are available in a wide range of sizes, including A-series dimensions up to a maximum A1 frame size. Featuring a 9mm profile depth, each wall mounted frame has a discreet lock to ensure the system is tamper-proof.

Architectural design

With products that look and feel as though they have been effortlessly constructed, there's usually complex and original design at work and the I-Sign Flex range adds weight to this theory. The frames open with an ingenious, patented, spring mechanism that's cleverly concealed.

Multifunctional non-illuminated frames

Projecting signs, hanging signs and a desk stand complete the I-Sign Flex range and are available in set dimensions to create flexible, coordinated wayfinding and interior branding systems. The seamless looking frames have a flush-face finish which, as well delivering a contemporary design, eliminates the collection of dust along the frame's edges.

Create coordinated systems

With design uniformity, the system can be used to create fully complimentary systems for offices, hospitals, museums and educational establishments alongside retail and hospitality environments.

Key features

- Stylish, sleek and beautifully engineered
- Opens with a patented spring mechanism
- Includes A-series wall mounted frame sizes, A6 - A1
- Tamper-proof wall mounted frames
- Uniform system in silver anodised aluminium

I-Sign Flex Features

1. The anti-reflective acrylic cover is flush with the top of the aluminum frame giving the I-Sign Flex range a sleek look.

4. To prevent unauthorised changing of inserts and ensure I-Sign Flex is tamper-proof, the frame is equipped with a locking function.

2. Inserts can be replaced easily after removing the acrylic cover with the help of an ingenious, patented, spring mechanism.

3. To wall mount an I-Sign Flex frame, double-sided tape or adjustable wall mount buttons can be used.
